

Toolkit on breast cancer screening - Belgian Intermutualistic Agency (IMA-AIM) - 2013/11/25

Context

After 6 years of public screening program (2002-2007), IMA highlights in its report 7 that 24% of Belgian women aged 50-69 years old were never breast examined during this period.

In cooperation with the three Communities and Belgian Foundation Against Cancer, Belgian Intermutualistic Agency (IMA-AIM) undertook a study with a view to understand why so many women are not examined.
